## INK AND WATER DRIVE

### CONTROL SYSTEM

manroland Goss has developed an upgrade to address Telemecanique ATV58 Speed Drive obsolescence. The modifications consist of current technology - the Siemens G120 Sinamics drives. The system includes power modules, control units, operator panel, and replaces Canbus with Profibus.

The upgrade applies to ink and water drives for Sunday® 4000 print units. All (4) drives within a printing unit must be replaced, however it is not necessary to upgrade all print units. Upgrade also applies when single ATV58 drives have been replaced by ATV71.

#### BENEFITS:

- Lower cost components
- Eliminates obsolescence and protects your production
- Readily available active technology extends functional life of your manroland Goss equipment
- Matches original manroland Goss design and performance specifications

#### REQUIREMENTS:

- Complete print unit must be converted
- ATV58 drives and Canbus exchanged for G120 and Profibus
- Updated firmware, drive configurations, and motor ID data
- Installed by manroland Goss trained technicians

#### APPLICATIONS:

- Sunday® 4000 Print Units (manufactured 1999-2006)

Specifications, features and dimensions are subject to availability along with change without prior notice
