NARROW WEB OILER SYSTEM

PERFORMANCE ENHANCEMENT

Reduce maintenance times and have cleaner operations with the narrow web oiler system performance improvement. The narrow web oiling system is an enhancement to current manroland Goss press systems and applicable to many other manroland Goss models.

This system coats the rollers with oil in the non-image area, preventing the build-up of ink and other associated problems with ink slinging, heat, and roller damage that occurs when running narrow webs on the wider presses.

FEATURES:

- Self-contained stand with pump, tank and filter
- Mounting bar provides easy adjustment of delivery tubes

BENEFITS:

- Reduced heat and ink build-up on roller edges
- Decreased incidence of damaged rollers
- Cleaner operation
- Less maintenance

REQUIREMENTS:

- Floor space for pumping station (110V or 220V available)
- Cross bar mounted adjacent to a designated ingoing nip in the upper inker
- Oil is transferred to the lower inker by the plate/blanket cylinders with the aid of mourning bands
- Dispensed oil volume based on impressions count and controlled by either integrated or non-integrated press controls
- Available for web width 38-75"

APPLICATIONS:

- Sunday® 2000
- M3000
- Sunday® 3000
- M-600
- Vpak 3000V
- Other manroland Goss presses upon inquiry
