OMNI FLOW – CONTINUOUS FLOW INK PUMP

INK SYSTEM ENHANCEMENT

Customers looking to rebuild or upgrade their old ink fountains or digital ink packs now have a better choice. Omni Flow is a precision ink delivery system that outperforms other open ink fountains and ink pumping equipment. This simple and reliable system provides the high degree of accuracy that meets the demands of today's high quality and cost conscious printers.

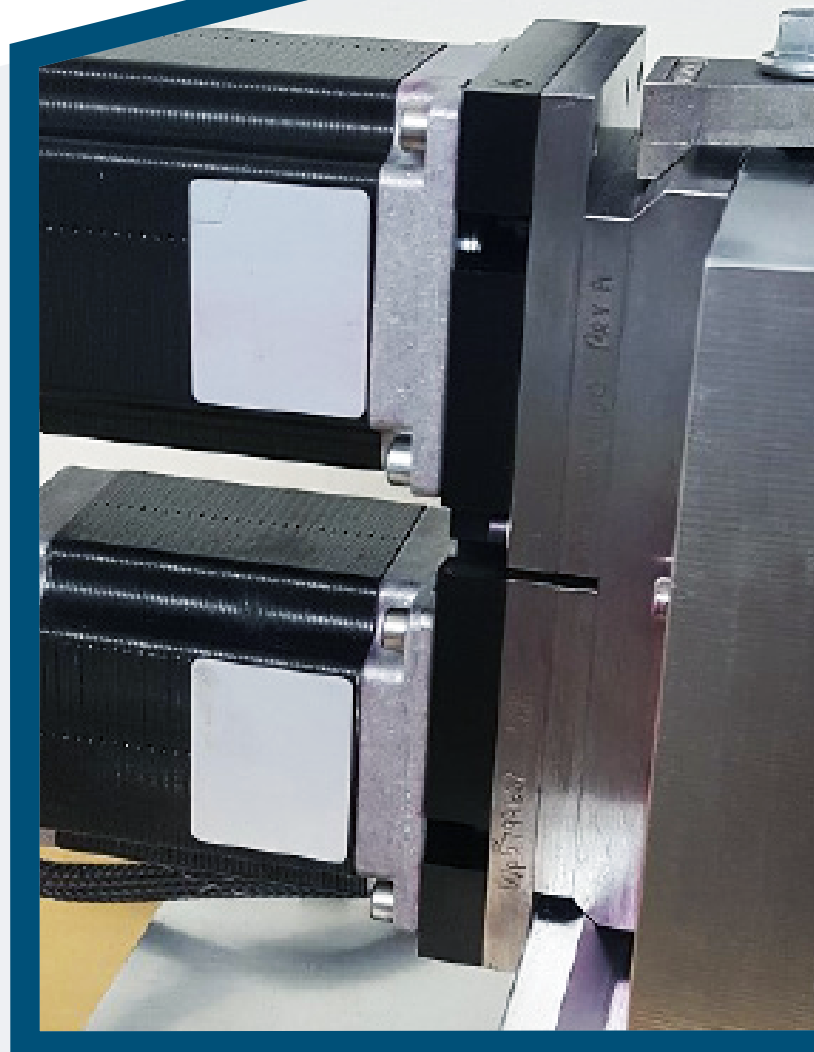

Omni Flow is available as a "drop-in" system that reduces the downtime and extensive labor involved with fountain rebuilds, and can also be used as an upgrade to a stand-alone system with remote color adjustment. Omni Flow also integrates well with certain closed loop color systems for added performance.

BENEFITS:

- Provides ink savings over open fountains
- Faster make-ready
- Less waste
 - No fountain key wear, no need to recalibrate
 - and no reliance on metering roll gap settings
- Delivers ink at an unmatched continuous rate
 - Highly reliable with few moving parts and no
 - high maintenance components
- Simple field maintenance – it can be exchanged or cleaned in minutes
- Compact and lighter with 2 zones per pack
- Color change option is the first of its kind and changes between different ink colors or ink tacks efficiently and in minutes. (Patent pending.)

REQUIREMENTS:

- All continuous inker (i.e., metering roll & non-ductor presses)
- Tele-Color II presses also require OmniColor upgrade
- Non-manroland Goss presses require stand-alone console
- Most up to date system requires OmniCon upgrade

APPLICATIONS:

- **Omnicon** or **HWDC** press system computers, including the servers, operator consoles, and **Omnicolor** consoles

Specifications, features and dimensions are subject to availability along with change without prior notice
