PLATE CYLINDER REMANUFACTURING

PERFORMANCE IMPROVEMENT & WASTE REDUCTION

The Plate cylinder remanufacturing program provides Sunday 2000 and 3000 users with the option to restore printing plate cylinders and plate lock-up mechanisms to near new functionality and performance.

After an assessment of the condition of the plate cylinder body and plate lock-up bar, the most cost effective method of repair and required component replacement will be determined.

Typically, depending on the extent of wear, cylinder repair will range from lock-up bar assembly refitting to additional OD surface and minor body repairs.

BENEFITS:

- Reduced plate cracking
- Decreased plate cost
- Reduced blanket damage
- Improved print quality
- Savings on make ready time

**This is a great way to save money
and extend cylinder life.**

Specifications, features and dimensions are subject to availability along with change without prior notice
